

SIMILE

Simply put, the simile definition is a literary device that compares two entities with words, 'like' or 'as' to show some sense of similarity between them. As a figure of speech, a simile uses vivid imagery and description to establish a connection between the two compared things. Simile meaning in language and literature is to help readers understand something complex by relating it to a familiar object. The intended meaning of a world of literature is understood more effectively through similes by connecting two seemingly unrelated things.
